HORIZON®
MIX DELIVERY SYSTEM

**INTRODUCING
A REVOLUTIONARY,
NEW SYSTEM DESIGNED
TO SIMPLIFY YOUR
FROZEN DESSERT
PRODUCTION...**

MODEL 8752

MODEL 8756

SIMPLIFIED DESIGN.

Now you can enjoy a pressurized system that produces a high quality frozen dessert product with consistent overrun and is easy to clean. The Horizon® Mix Delivery System has only six operator parts in the pump (13 total mix delivery parts). This simplified design means less crew training time and that means labor savings for you.

LOWER MAINTENANCE COSTS. HIGHER PROFITS.

With fewer pump parts, the Horizon Mix Delivery System cuts pump cleaning time in half – or better. And there is no need to remove the pump tube daily for cleaning. Less parts means less handling, thereby reducing repair costs and maintenance caused by operator error. That makes for a more productive work environment and additional cost savings which increases your profit!

OPTIMAL OVERRUN CONTROL.

Under normal operating conditions, overrun is from 25% to 70% and is maintained at $\pm 2\%$. The adjustable flow meter eliminates the need to purchase additional freezer parts when you make menu changes that result in overrun changes.

CONSISTENT PERFORMANCE. MORE CHOICES.

The Horizon Mix Delivery System typically produces 15 gallons (56.8 liters) per hour. It accepts seeds, pulp and high butterfat mixes without problems, unlike situations you might have experienced with conventional systems. This larger selection of product variation means an expandable daypart menu for you.
